Secretaría
de Minería

DISCLAIMER

The purpose of this Secretariat of Mining publication is to disseminate third-party information on the exploratory results of advanced projects and the country's geological mining potential.

The data has been compiled from various public sources available, including, but not limited to, websites of operating/controlling companies and their technical reports published under international standards, thus ensuring a level of reliability.

It is essential to advise that, in certain cases, the data recorded corresponds to estimates.

In this regard, the Secretariat of Mining assumes no responsibility for the accuracy or veracity of such information, as it exceeds its jurisdiction.

To obtain accurate and thorough information on the legal, social, or environmental status of the projects, the interested parties should consult directly with the competent local authorities. This recommendation is given because deposits are property of the Nation or the Provinces, according to their territorial jurisdiction (Articles 124 and 75, paragraph 12 of the National Constitution, and Article 7 and related articles of the National Mining Code).

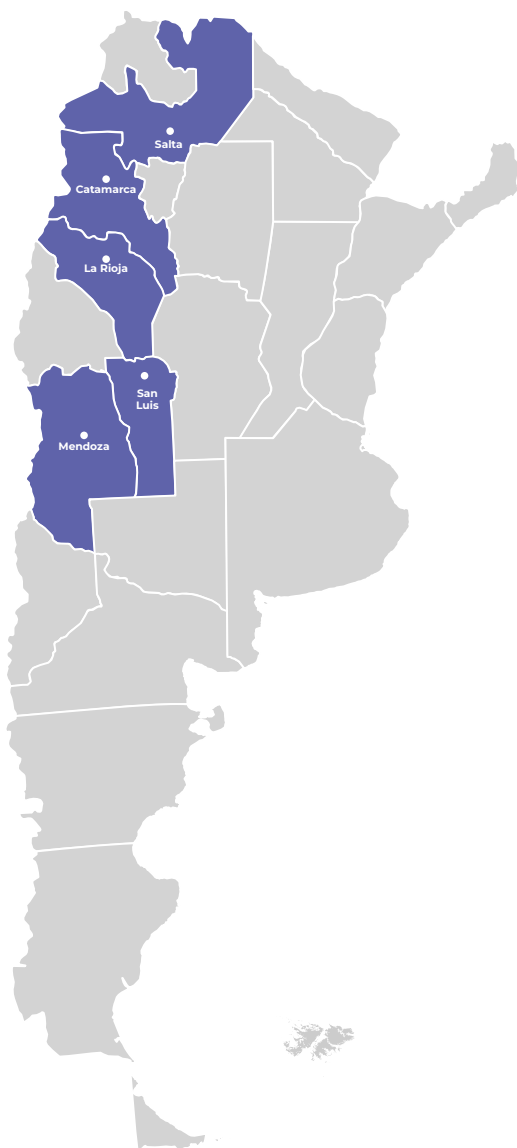

Nothing about this publication or its updates could be interpreted as an acknowledgment or advance opinion of the Secretariat of Mining at any proceedings before it. The Secretariat of Mining decisions will be issued at the appropriate time and after following every stage of the corresponding administrative procedure.

Consequently, the public information generated by the institutional administrative mechanisms presented here has a technical and referential character, consisting of specific and relevant data for informational purposes. Its use will not be admitted at any proceedings, not even Registries and/or application in promotional schemes.

The Secretariat of Mining is not responsible for the improper use or misinterpretation of this information.

1.

COBALT

Uses in the energy transition

- Batteries
- Wind turbines
- SOFC
- Superalloys

Annual production in Argentina

None

Resources in Argentina

< 5,000 Tonnes

Provinces

Salta, Catamarca, La Rioja, San Luis, Mendoza

Main deposits

King Tut, La Niquelina, Cordón del Cobre, Las Águilas, Fiambalá, Salamanca District

Global demand projection (2035)

Scenario*

STEPS: 329 kTn

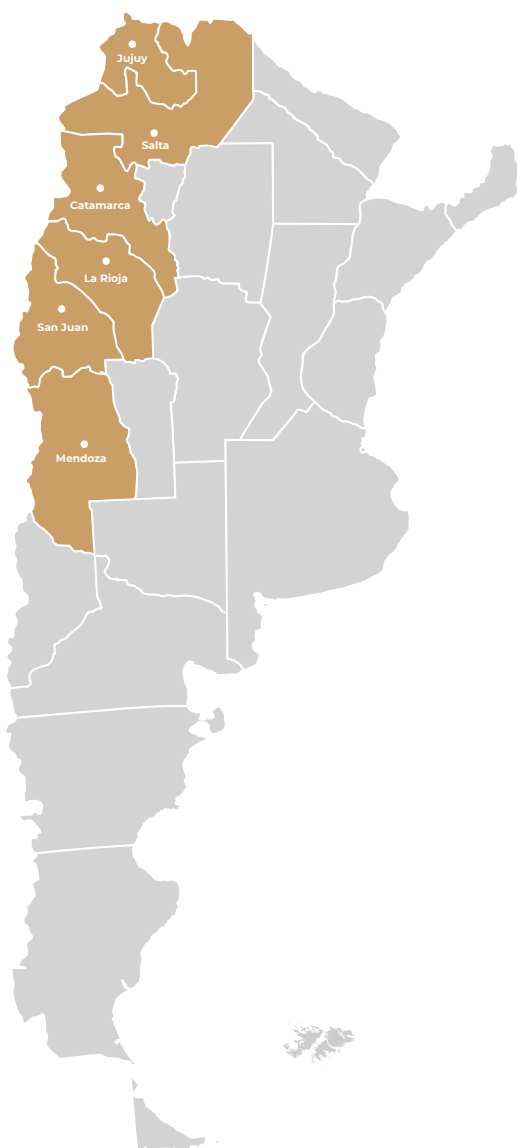

APS: 361 kTn

NZE: 453 kTn

*The International Energy Agency. Scenario: STEPS: Stated Policies Scenario; APS: Announced Pledges Scenario; NZE: Net Zero Emissions by 2050

2. COPPER

Uses in the energy transition

- Energy Storage - Wind turbines
- Vehicles - Solar energy

Annual production in Argentina

None

Resources in Argentina

117,9 million tonnes

Source: DNPYEM 2026

Provinces

Jujuy, Salta, Catamarca, La Rioja, San Juan, Mendoza

Main deposits

Mara Project, Taca Taca, Josemaría, Pachón, Los Azules, San Jorge, Altar, Filo del Sol.

Global demand projection (2035)

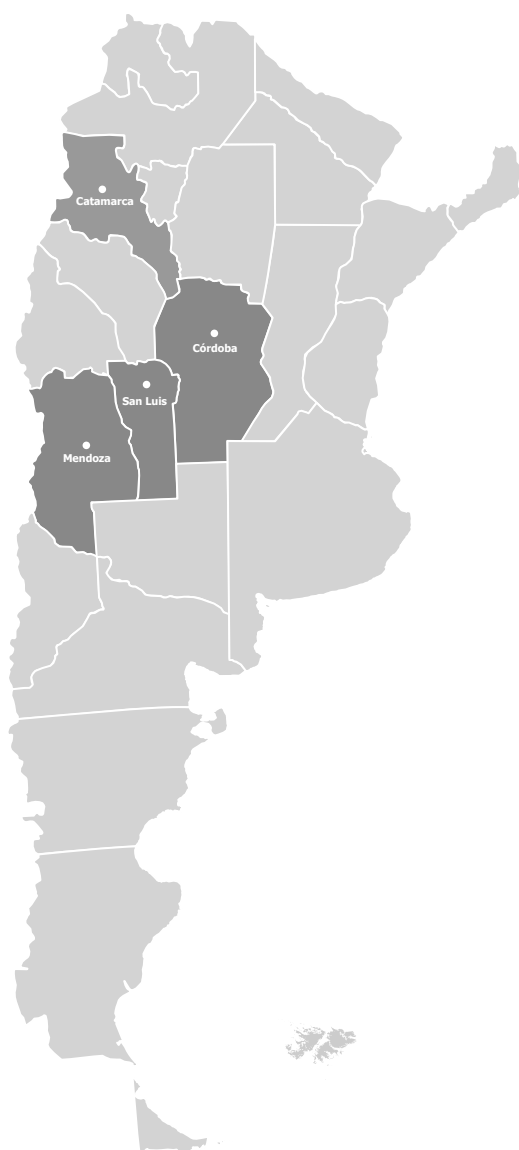

Scenario*

STEPS: 32,534 kTn

APS: 34,584 kTn

NZE: 38,416 kTn

3. CHROMIUM

Uses in the energy transition

- SOFC
- Wind turbines

Annual production in Argentina

None

Resources in Argentina

< 500 Tonnes

Provinces

Catamarca, Córdoba, San Luis, Mendoza

Main deposits

Cerro San Lorenzo, Piedras Negras, Los Permalentes, Los Guanacos, Distrito Salamanca, Las Aguilas District

Global demand projection (2035)

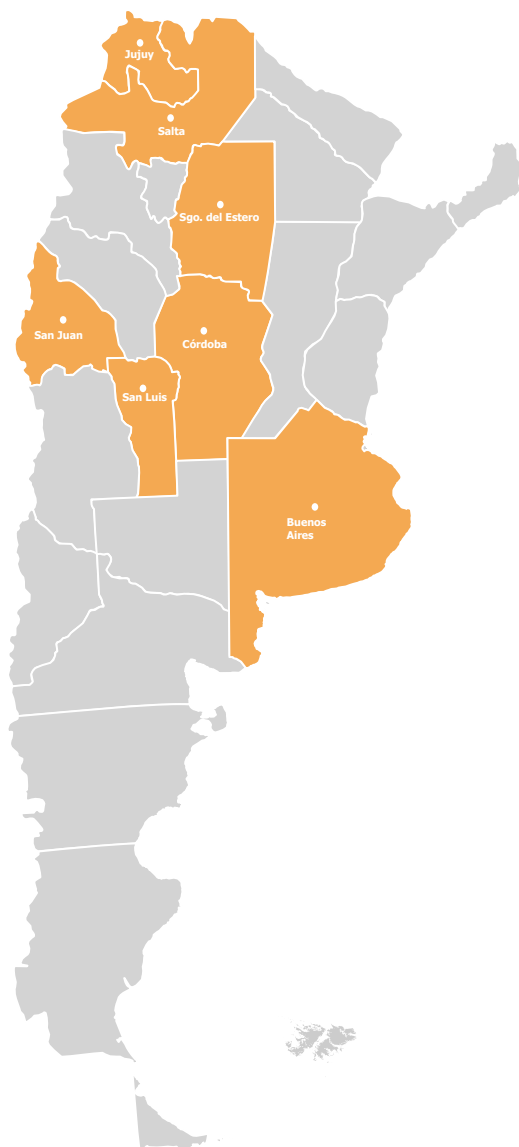

Scenario*

STEPS: 299 kTn

APS: 474 kTn

NZE: 726 kTn

4. RARE-EARTH ELEMENT

Uses in the energy transition

- Batteries
- Wind turbines
- SOFC
- Superalloys

Annual production in Argentina

None

Resources in Argentina

< 500 Tonnes

Provinces

Jujuy, Salta, Santiago del Estero, San Juan, San Luis, Córdoba, Buenos Aires

Main deposits

Continental Shelf, Distrito Rangel, Churqui-Pampa, El Quemado District, Isis-Osiris-, Rodeo de los Molles, Jasimampa, Distrito Valle Fértil, Cordón del Cobre

Global demand projection (2035)

Scenario*

STEPS: 140 kTn

APS: 149 kTn

NZE: 172 kTn

5. GRAPHITE

Uses in the energy transition

- Rechargeable batteries
- Polymer electrolyte membrane (PEM) fuel cells

Annual production in Argentina

None

Resources in Argentina

37,500 Tonnes

Provinces

Catamarca, La Rioja, San Juan, San Luis, Mendoza, Córdoba

Main deposits

Los Dos, La Paraguaya, Sa. Pie de Palo, Sierra Chica

Global demand projection (2035)

Scenario*

STEPS: 10,329 kTn

APS: 11,819 kTn

NZE: 18,167 kTn

6. LITHIUM

Uses in the energy transition

- Batteries

Annual production in Argentina

122,429 Tn LCE

Source: USGS 2026

Resources in Argentina

217.05 M Tn LCE

Source: DNPYEM 2026

Provinces

Salta, Catamarca, Jujuy

Main deposits

Olaroz-Cauchari Basin, Hombre Muerto Basin, Centenario- Pastos Grandes Basin, Salar del Rincón Basin, Arizaro Basin

Global demand projection (2035)

Scenario*

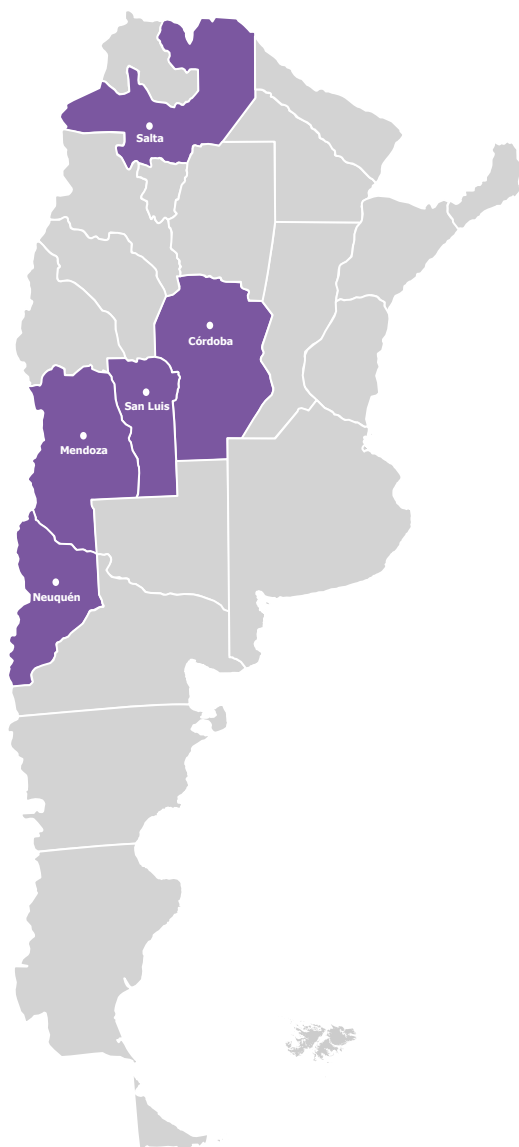

STEPS: 695 kTn

APS: 835 kTn

NZE: 1,216 kTn

7. MANGANESE

Uses in the energy transition

- Ferroalloys (pipes)
- Ferroalloys (automotive industry)
- Batteries (cathodes)

Annual production in Argentina

None

Resources in Argentina

440,000 Tonnes

Provinces

Salta, Córdoba, San Luis, Mendoza, Neuquén

Main deposits

Ethel, La Casualidad, Cerro Remate, Tres Lomitas, Fátima

Global demand projection (2035)

Scenario*

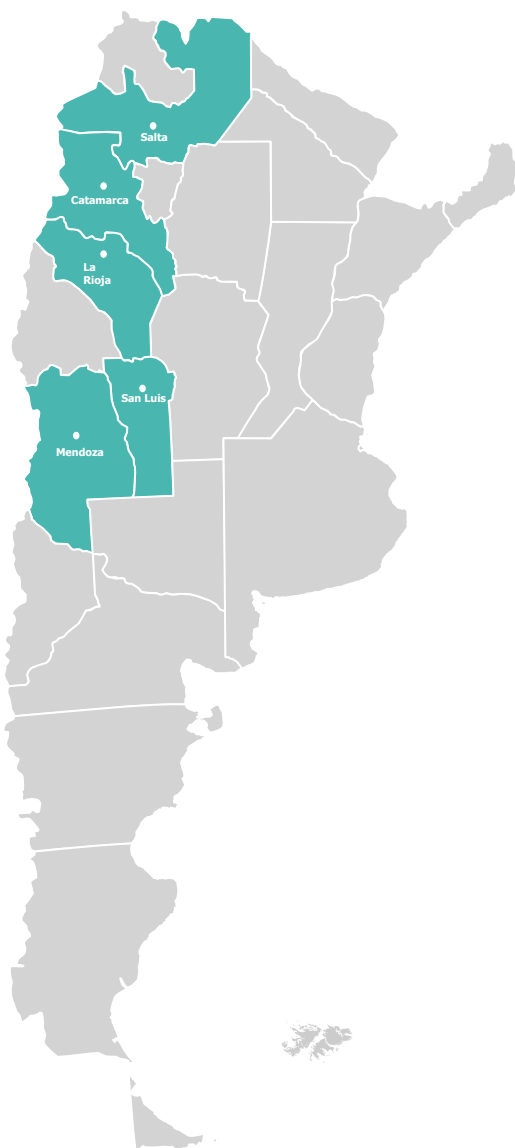

STEPS: 1,226 kTn

APS: 1,571 kTn

NZE: 2,355.5 kTn

8. NICKEL

Uses in the energy transition

- Batteries for electric vehicles
- Nickel alloys in power generation equipment
- Stainless steel pipes for CO2 capture and storage

Annual production in Argentina

None

Resources in Argentina

< 10,000 Tonnes

Provinces

Salta, Catamarca, La Rioja, San Luis, Mendoza

Main deposits

Las Águilas, Fiambalá, Sierra del Espinal, Alkaline Magmatism in the Cordillera Oriental and Sub-Andean Ranges, Salamanca District

Global demand projection (2035)

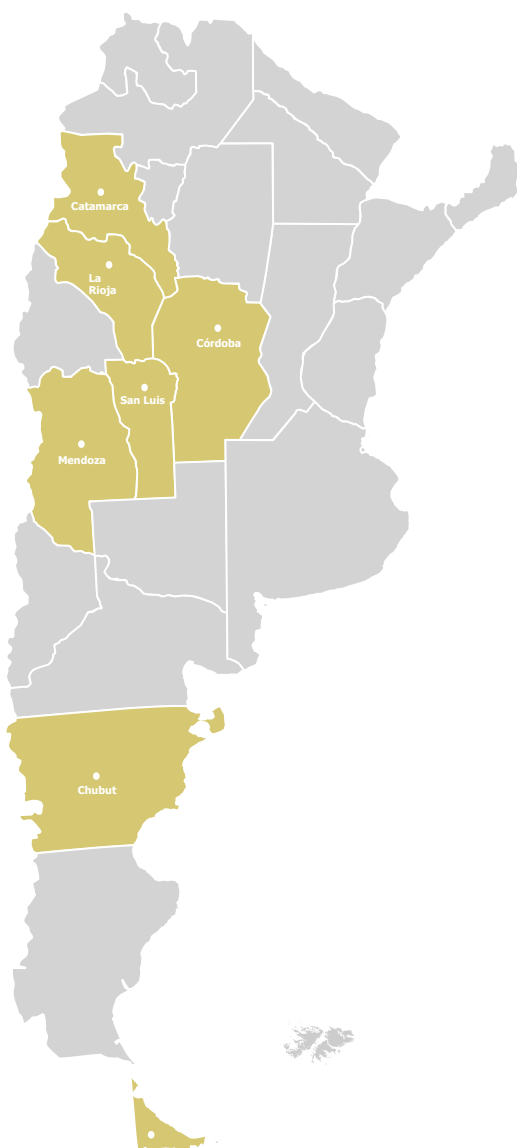

Scenario*

STEPS: 5,130 kTn

APS: 5,5527 kTn

NZE: 6,715 kTn

9. THE PLATINUM-GROUP ELEMENTS (PGE)

Uses in the energy transition

- Catalysts
- Wind turbines
- Fuel cells

Annual production in Argentina

None

Resources in Argentina

Undetermined

Provinces

Catamarca, La Rioja, Córdoba, San Luis, Mendoza, Chubut, Tierra del Fuego

Main deposits

Fiambalá, Umango, Las Águilas - Virorco Complex, Cerro San Lorenzo, Puesto La Peña, Tecka-Tepuel Complex, Salamanca District

Global demand projection (2035)

Scenario*

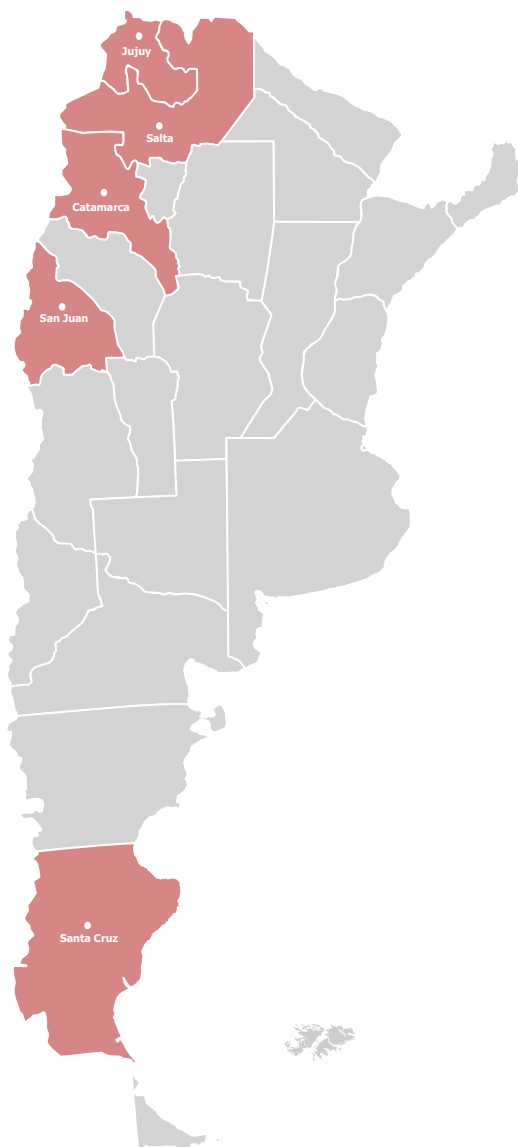

STEPS: 0.015 kTn

APS: 0.029 kTn

NZE: 0.049 kTn

10. ZINC

Uses in the energy transition

- Wind turbines

Annual production in Argentina

5,710 Tonnes

Resources in Argentina

2,265,657 Tonnes

Provinces

Jujuy, Salta, Catamarca, San Juan, Santa Cruz

Main deposits

Pirquitas - Chinchillas, Aguilar District, Pan de Azúcar District, Los Ratones, Limeca, Salamanca District, Gonzalito Polymetallic District

Global demand projection (2035)

Scenario*

STEPS: 990.5 kTn

APS: 1,389.7 kTn

NZE: 2,141.5 kTn

AUTORIDADES

Presidente de la Nación

Lic. Javier Milei

Ministro de Economía

Lic. Luis Caputo

Secretario de Coordinación de Energía y Minería

Lic. Daniel González
